SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

During sequence assembly data is compared gi:13990191.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality): an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MIJ subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT: Tr:, TREMBL: WP:, WORMPEP: Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                       AL590028 129332 bp DNA PRI 09-MAY-2001
Human DNA sequence from clone RP11-384M8 on chromosome 13, complete
                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         IMPORTANT: This sequence is not the entire insert of clone RP11-384M8 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true left end of clone RP11-131P10 is at 12923 in this sequence. The true right end of clone RP11-19612 is at 100 in this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 http://www.sanger.ac.uk/HGP/Chr13
RP11-384M8 is from the library RPCI-11.2 constructed by the group
of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Craniata; Vertebrata; Buteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Center clone name: R69
Center clone name: RP11-286K2
Center clone name: RP11-286K2
Sequencing Vector: MJ3mp18; X02513; 99% of reads
Sequencing Vector: plasmid; plasmid_accession;
Chemistry: Dye-primer; 0% of reads
Chemistry: Dye-terminator B1g Dye;
Chemistry: Dye-terminator B1g Dye;
Assembly program: Phrap; version 0.990319
Consensus quality: 161053 bases at least 040
Consensus quality: 161056 bases at least 030
Consensus quality: 161541 bases at least 030
Consensus quality: 162056 bases at least 030
Consensus quality: 162056 bases; agerose-fp
Insert size: 163403; sum-of-contigs
Ouality coverage: 8.9x in 020 bases; sum-of-contigs.
* NOTE: This is a "working draft' sequence record is
* consists of 3 contigs. The true corder of the places
* is not known and their order in this sequence record is
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                          Search time 222.02 Seconds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

Transforming plants with a nucleic acid molecule encoding cytochrome P450 reductase alters the yield and/or type of alkaloids produced.

In oplum popples it specifically increases the yield of medically useful alkaloids such as morphine, codeine, oripavine and thebaine. Sequences complementary to the coding sequence of cytochrome P450 reductase are useful as probes, primers and antisense sequences, or for design of ribozymes. Transformation with DNA encoding the content and of the relative proportions of individual alkaloid content and of the relative proportions of individual alkaloids. produced. Increasing the alkaloid content of poppy straw should reduce the cost of alkaloid production. Cytochrome P450 reductase is the rate-limiting enzyme in blosynthesis of alkaloids in popples. Peptide fragments of the cytochrome P450 reductase are described in AAW85672-W85678.
                                                                                                                                                                                                                                                                                                                                                                                                                                              other;

                                                                                                                                                                                                                                                               A new method for determining whether a DNA sequence encodes an NADPH cytochrome P450 reductase involves transforming yeasts with plasmids of a total cDNA bank of plant(s). The yeasts used in the procedure are incapable of producing their own NADPH cytochrome P450 reductase. They are then exposed to a cytochrome P450 inhibitor at a level which is lethal to the yeast cells but not to cells which, because of the transformation, now contain an active NADPH cytochrome P450 reductase. Surviving clones are then isolated and plasmid DNA extracted. The gene is inserted into the plasmid at a

called human colon cancer antigens, given in AAB5224 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, vulnerary, nephrotropic, antilnfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polynucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, immune gastrointestinal disorders, wounds, renal disorders, immune diseases, and cardiovascular disorders. AAC987764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                          Colon cancer associated gene sequences, referred to as colon cancer antigens, useful for the treatment, prevention, and diagnosis of colon disorders such as colon cancer -

The invention relates to ebl-1 polypeptides that are encoded by the DBL (Duffy-binding like) gene family. The ebl-1 proteins are substantially identical to the Duffy Antigen Binding Protein (DABP) and Sialic Acid Binding Protein (SABP), which are soluble proteins that appear in the culture supernatant after erythrocytes infected with malaria release merozoites. Immunochemical studies indicate that DABP and SABP are the respective ligands for Plasmodium vivax and Plasmodium falciparum Duffy and stalic acid receptors on erythrocytes. The ebl-1 polypeptides may be used to vaccinate against malaria, especially caused by P. falciparum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DBL gene; Duffy-binding like gene; ebl-1; Duffy Antigen Binding Protein; DABP; Sialic Acid Binding Protein; SABP; malaria; vaccine; immunisation;
acid binding protein (SABP). SABP and the Duffy antigen binding protein (DABP) are soluble proteins that appear in the culture supernatant after infected erythrocytes release merozoites. DABP and SABP mediate the binding of merozoites and schizonts to the erythrocyte surface. These proteins are necessary for erythrocyte invasion by the parasite. This sequence can be used in the compositions of the invention. The compositions are for the treatment and prevention of malaria, and comprise either a nucleotide sequence or encoded polypeptide of the gener. In any are 1, var.7 genes of the DBL gene family, a family of genes having homology with conserved regions of DABP and SABP. The compositions are used for the treatment and prevention of malaria. They are also used in the preparation of vaccines for inducing a protective immune response in a mammal to Plasmodium merozoites (especially plasmodium falciparum or Plasmodium vivax).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated protein binding domains from Plasmodium vivax and Plasmodium falciparum erythrocyte binding proteins useful for vaccinating against

                                                                                                                                                                                                              Sequences from the SABP gene (given in AAQ83525) were PCR amplified, expressed on the surface of COS cells and tested for erythrocyte binding to identify the binding domain polypeptide. A prefd. SABP binding domain comprises residues 1 to about 616 of the SABP protein (AARR0232). Recombinant binding domain was expressed in E. coli, yeast, mammallan, insect, and in vaccinia virus and adenovirus-

```
the activity of a potassium channel protein, and/or modulate a potassium channel mediated activity in a cell. The polynuclocides and polypeptides are useful in the treatment of epilepsy, and spinocerebellar ataxia, as well as nervous system related disorders and cardiovascular disorders associated with abnormal transient outward currents. They are also useful for identifying compounds which can bind to and modulate the expression and function of the PCIP nucleic
                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                            Key
 Transforming plants with a nucleic acid molecule encoding cytochrome P450 reductase alters the yield and/or type of alkaloids produced. In optium popples it specifically increases the yield of medically useful alkaloids such as morphine, codeine, oripavine and thebaine. Sequences complementary to the coding sequence of cytochrome P450 reductase are useful as probes, primers and antisense sequences, or for design of riboxymes. Transformation with DNA encoding the cytochrome P450 reductase allows regulation of the total alkaloid content and of the relative proportions of individual alkaloids. produced. Increasing the alkaloid content of poppy straw should reduce the cost of alkaloid production. Cytochrome P450 reductase is the rate-limiting enzyme in biosynthesis of alkaloids in poppies. Peptide fragments of the cytochrome P450 reductase are described in
                                                                                                                                                                          Opium poppy; alkaloids; cytochrome P450 reductase; morphine; codeine; oripavine; thebaine; transformation; crop yield; probe;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 20; DB 20; Length 2558;

```
The present sequence is a nucleic acid fragment which encodes proliferating cell nucleolar antigen (PCNA) P120, a plant cell proliferating cell nucleolar antigen (PCNA) P120, a plant cell consisted protein from Zea mays. The entire sequence.

Consisted in a clone designated poll5.clsme95r from a cDNA library made from corn leaf and sheath meristem tissue. Chimeric genes containing the present nucleic acid fragment can be introduced into monocots and dicots concounter, the fragment can be overexpressed or expressed at certain developmental stages or in certain tissues. Co-suppression or antisense chimeric genes can also be introduced to produce plants with reduced or climeric genes can also be introduced to produce plants with reduced or eliminated gene expression, thus inhibiting cell division and protein it encodes may also be used to transform E. coll in order to produce high levels of the protein for analysis. The nucleic acid and the protein it encodes may be used to stimulate plant growth and cill division and proliferation and to identify modulators of cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

```
The invention relates to nucleic acids from human chromosome 2p21-16.3
and the encoded peptide (and mouse and chicken orthologues) that
comprises a PGECCPLP group, an insulin-like growth factor binding protein
(IGFBP)-like domain, cysteine-rich domains, an RGD (undefined) group
and a transmembrane domain. The protein, e.g. CRIMI, interacts with
peptides of the transforming growth factor superfamily. A composition
comprising an expression construct comprising the nucleic acids of the
invention or a mimetic which antagonises or mimics an activity of a CRIMI
polypeptide may be used in a method for modulating the biological
activity of a polypeptide of the bone morphogenic protein (BMP) family.
In this way they may be used to prevent or treat an eye disease,
especially cataract formation. They may also be used to treat
neurodegenerative diseases, renal and kidney disease, bone and tooth
abnormalities, wounds and skin damage, e.g. by use of the nucleic acid in
gene therapy by using antibodies directed against CRIMI polypeptides.
The present sequence encodes mouse CRIMI (AKA S52).
                                                                CRIM-1; Mouse; human chromosome 2p21-16.3; ophthalmological; neuroprotective; renal; osteopathic; dental; vulnerary; immunogen; antibody; gene therapy; neurodegenerative disease; eye disorder; cataract; bone morphogenic protein; BMG; renal disease; bone abnormality; tooth abnormality; wound; ss; S52.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids from human chromosome 2p21-16.3 and the encoded peptide, useful for preventing, diagnosing and treating e.g. eye disease, especially cataract formation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Georgas K, Kolle G, Wilkinson L;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4101 BP; 967 A; 1067 C; 1154 G; 911 T; 2 other;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 3,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description
